# Risk Adjustment and Providers

# Risk Adjustment Overview

- Risk Adjustment is the method developed and used by the Department of Health & Human Services (HHS) to predict health costs of members.
- The purpose of risk adjustment is to deter plans from developing products that only attract the healthiest members – protect against adverse selection
- Center for Medicaid and Medicare Services uses the Hierarchical Condition Category (HCC) grouping logic as basis of risk adjustment

# Hierarchical Condition Categories

- HCC's – Assigns risk factor score based upon chronic health conditions, demographics detail
  - ❖ Age
  - ❖ Gender
  - ❖ If member is community based or institution based
  - ❖ Interaction between disease categories within the hierarchy
  - ❖ Chronic conditions
- HCC's help predict healthcare costs for plan enrollees
- HCC's are based on encounter or claims data collected from providers
- Not all diagnosis map to an HCC

# Risk Adjustment Requirements

- CMS & HHS **REQUIRE** health plans to report complete **and** accurate diagnostic information on enrollees **ANNUALLY**
  - ❖ Conditions not documented annually do not exist
- Opportunity for providers to provide comprehensive care with every face-to face encounter
  - ❖ Document chronic conditions, co-existing conditions, active status conditions, and pertinent past conditions

# Risk Adjustment & Providers

## Comprehensive Care Approach

- Address all chronic conditions each visit

## Document Diagnosis

- Use ICD-10 on claims to document conditions that exist
- Provide support for all dx in medical records

Utilize Vendor Assessment Forms

Code to highest-specificity and include ICD-10 on claim  
and support in medical record

## Managing

**SIGNS, SYMPTOMS, DISEASE PROGRESSION, DISEASE REGRESSION**  
**EXAMPLE:** CHF, SYMPTOMS WELL CONTROLLED ON LASIX AND ACE INHIBITOR. CONTINUE TO MONITOR.

## Evaluating

**TEST RESULTS, MEDICATION EFFECTIVENESS, RESPONSE TO TREATMENT**  
**EXAMPLE:** MAJOR DEPRESSION, ZOLOFT 50 MG PER DAY, PATIENT STILL FEELS HOPELESSNESS. RAISE TO 100 MG FOR THE NEXT TWO WEEKS.

- ✓ A valid reportable diagnosis requires documentation supporting that the condition is being managed, evaluated, assessed, or treated during each visit.

# Coding & Documentation

- Be as specific as possible when documenting conditions
- One word, such as “chronic” can make a big difference in risk adjustment.

**COMPLETE AND

The Centers for Medicare & Medicaid Services (CMS) regulates all laboratory testing (except research) performed on humans in the U.S. through the Clinical Laboratory Improvement Amendments (CLIA). In total, CLIA covers approximately 260,000 laboratory entities. The Division of Clinical Laboratory Improvement & Quality, within the Quality, Safety & Oversight Group, under the Center for Clinical Standards and Quality (CCSQ) has the responsibility for implementing the CLIA Program.

The objective of the CLIA program is to ensure quality laboratory testing. Although all clinical laboratories must be properly certified to receive Medicare or Medicaid payments, CLIA has no direct Medicare or Medicaid program responsibilities.
