

## Breast Cancer Screening (BCS-E)

This measure evaluates members 50–74 years of age as of December 31 who had a mammogram to screen for breast cancer between October 31 two years prior to the measurement year and December 31 of the measurement year.

**Note:** The BCS measure assesses the use of imaging to detect early breast cancer in members.

- All types and methods of mammograms (screening, diagnostic, film, digital, or digital breast tomosynthesis) meet this measure.
- MRIs, ultrasounds, or biopsies do not count toward this measure.

## Cervical Cancer Screening (CCS) (CCS-E)

Measure evaluates members who were screened for cervical cancer using any of the following criteria:

- Members ages 21–64 who had cervical cytology performed within the last three years
- Members ages 30–64 who had cervical high-risk human papillomavirus (hrHPV) testing within the last five years
- Members ages 30–64 who had cervical cytology/high-risk human papillomavirus (hrHPV) cotesting within the last five years

**Documentation must include a note indicating the date the test was performed and the result or finding.**

**Excludes:** Members who had a prior hysterectomy with no residual cervix, cervical agenesis, or acquired absence of cervix any time during the member's history through December 31 of the measurement year. Documentation of hysterectomy alone does not meet the criteria because it is not sufficient evidence that the cervix was removed.
